Top Reasons

Why Pembrian One Directory Unifier for Active Directory

Directory Unifier is the best way to synchronize information between different directories such as the IBM Lotus Domino Directory, Microsoft Active Directory, Microsoft Office365, and Google Apps Directory. You can synchronize anything in your directory, people, groups, shared mailboxes, and rooms easily and seamlessly. Hands off and set it and forget synchronization allows you to deliver high quality directory information without the overhead of managing multiple systems.

1. Only Product to Sync with Office 365

Sync foreign directories to Office 365 directory or on Premise Directory easily and quickly. No other product synchronizes between Office 365 directory and other directory systems.

2. Sync foreign directories to Office 365 and Active Directory in real time

Create high fidelity between your foreign directories and Active Directories in real and near time. Migrating directory information to on-premise Exchange or Office 365 has never been easier due to the fluid transition of consistent information between legacy and Exchange/Office 365.

3. Reduce end user frustration and support calls

Eliminate support calls due to stale or bad information in Active Directory. Create high satisfaction due to continuity in directory information brought into AD from foreign directories.

4. Easily replace legacy directory synchronization products

Eliminate frustration from out of support products and products that don't work quite right. No need to eliminate existing information created by legacy products, Directory Unifier can manage that information immediately and fill in the gaps where other tools leave off.

5. Multiple Sync Points (Sync between several directories into one target)

Sync more than one foreign directory into Active Directory and (vice versa).
Most other products only sync one foreign Directory Unifier can sync several foreign directories between Active Directory.

6. High Speed Synchronization of multiple AD objects per minute.

Your directory is only as good as the data that is in it. Directory Unifier is optimized to efficiently sync thousands of objects per minute.

7. High Fidelity - Synchronize as much information as you want (all email addresses and all relevant user information. Manages and prevents duplicate conflicts.

Synchronize all AD attributes in Users and Contact objects on premise or in the cloud between foreign directories with ease. You are not limited to just a handful of attributes, synchronize the data that makes sense.

8. Synchronize Distribution List and Group Membership with ease.

Synchronize Distribution List members between foreign directories. Other products simply create a contact, while Directory Unifier actually creates and maintains real distribution list synchronization.

9. Experts in Active Directory and Foreign Directory Synchronization

Pembrian developers, support staff, and consultants have the expertise to tackle your toughest directory synchronization and integration problems. We've solved complex directory issues spanning multiple platforms and vendors for the last 10 years.

10. Ready to create the best user experience

Ultimately our product is end user satisfaction and we do that by giving you the tools and support necessary to deliver a high fidelity directory for mail and apps to your end users
